

Wildlife Management Plan gains support

Wallaby deaths on the roads in the northern beaches have led to a partnership between State government, Cairns City Council, community and industry to develop a Wildlife Management Plan to help retain sustainable numbers of native animals in the face of increasing development pressures.

An initiative of Dr Lesley Clark, the Plan will be prepared by the Rainforest Cooperative Research Centre based at JCU.

Orphaned wallabies like these provided the catalyst for the development of a Wildlife Management Plan for the Northern Beaches and Barron River delta
